

## Inter-site Transfers

### The Need

Having the right amount of inventory is a key goal for any distributor. In occurrences where stock is needed at other locations, it is important that the stock is accounted for and tracked while in transit.

### The Solution

The Trinity Myridas Inter-Site Transfers module provides the functionality for carrying out stock transfers between sites. When physically transferring items between sites, there will be a time period when the items are not at either site, whether they are being transferred across a country or even across a business estate. The Inter-Site Transfers module allows you to set up "In-Transit" sites so that stock transferred between sites can be continually tracked.

### Key Features:

- Stock Transfer

The facility to transfer stock between sites while maintaining permanent visibility.

- In-Transit Sites

Multiple In-Transit sites can be set up in the Inter-Site Details Maintenance window. In-Transit sites are used solely for the allocation of inter-site transfers and represent the period during which items are at neither the purchasing nor the selling site.

- Internal Debtors & Creditors

Internal Debtors and Creditors are used primarily in sales and purchasing transactions where debtors and creditors must be entered. All sites involved in Inter-Site Transfers should have Internal Debtor and Internal Creditor values assigned to them in the Inter-Site Details Maintenance window.

- Purchase Order Creation

The Microsoft Dynamics™ GP Purchase Order Entry window has been given added functionality by the Inter-Site Transfers module to create purchase orders for inter-site transfers. Inter-site purchase orders can also be generated automatically using the Microsoft Dynamics™ GP Generate Suggested Purchase Orders window.
